

PRESS RELEASE

Lyravox to show fully integrated high-end active systems KARL and KARLOTTA at High End 2017

Hamburg, 15 May 2017 – Since 2014, Lyravox enriches the world of hifi with innovative and elegant concepts for outstanding products to give high end a new shape. The Hamburg based company will exhibit the world's first fully integrated full-size high-end audio systems KARL and KARLOTTA at trade fair High End 2017 from 18th to 21st May at booth H11 in hall 2. This new class of floor-standing speakers combines audiophile ceramic drivers and potent Pascal® power amplifiers with an integrated streaming unit. High-resolution audio files can thus be streamed directly through the systems from your home network, mobile devices or streaming services.

Holistic audio system with outstanding performance

KARL and KARLOTTA mark the first floor-standing speakers from Lyravox. The active high-end systems are equipped with eight Pascal® power amplifiers boasting 500 watts of power each. The active electronics grant high-resolution digital frequency separation, distortion correction and delay correction through FIR technology for all eight individually powered channels. Lyravox combines the advantages of a fully active system with the remarkable qualities of modern ceramic membranes to achieve overwhelming sound. KARL and KARLOTTA accomplish an exceptionally detailed reproduction of stage, tone, texture, timbre, dynamics, timing and homogeneity to perfectly convey the soul of the music.

Perfect integration of high resolution streaming

Today, music is more readily available than ever. The Lyravox streamer integrated in KARL and KARLOTTA can directly play back high-resolution audio from your home network, from streaming services online or from smartphone or tablet. From the local network, the streamer will play audio up to 24 bit at 192 kHz, from the internet, it can access TIDAL® or Qobuz®, both now in high-res quality, too. As for wireless playback from your smartphone, KARL and KARLOTTA support uncompressed music transmission via Bluetooth apt-X®. In addition to these wireless connections, both systems also offer digital and analogue connectors for using external sources with the speakers.

Intuitive control and optimal setup

KARL and KARLOTTA can be comfortably controlled with the included remote control featuring a high-resolution colour display. In addition, the Lyravox Remote App is available for free for both iOS® and Android® devices and offers the same functionality. To guarantee ideal sound performance, the initial setup will not be performed by automatic algorithms – specially trained experts will tailor the system to your specific room instead. From the assembly of finest components down to the very integration into the listening room, KARL and KARLOTTA are holistic systems hand-built to perfection.

Get to know KARL and KARLOTTA personally at High End 2017

Lyravox presents the fully integrated high-end music systems KARL and KARLOTTA from 18th to 21st May at High End 2017 at MOC trade fair centre in Munich, including private concerts. Find the Lyravox booth H11 in hall 2. Lyravox look forward to your visit!

Lyravox company profile

The Hamburg-based company Lyravox Geraetemanufaktur was founded in 2013 by Dr. Götz von Laffert and Jens Wietschorke to create a completely new type of product that combines high-end audio enjoyment with state-of-the-art construction and modern day functionality. The luxurious audio systems are created individually by hand to fit perfectly in any living space. Both the wall-mounted unicabinet solutions and the floor-standing speakers offer the technology of big high-end systems as well as the functionality of modern multi-room or streaming devices. Lyravox' acoustic concept is based on the idea to create the best possible solutions regarding the physics of sound through modern electronic and digital components. In addition to standard products, Lyravox also offers custom solutions for object integration as well as installations in yachts and private jets.
