## THE CERAMIC REVOLUTION CONTINUES: INTRODUCING KARLINA AND KARLOS

Following the huge success of the world's first ceramic/diamond driver-based digital/active speaker systems, KARL and KARLOTTA, inventor Lyravox now proudly introduces two new family members of the same breed but with more compact dimensions. Both come with the identical feature set of their larger siblings.

KARLINA is directly derived from KARLOTTA, designed as a three-way plus ambience active system, engineered into a two-segment enclosure. The front drivers are uniformly Accuton® ceramic dome units in a classic monitor configuration. The base segment houses a rear firing Scan Speak® 26W 10-inch aluminum cone woofer (in both units). This ‚dream team‘ of world class main drivers is supplemented by a single up-firing high efficiency air motion transformer as the ambience tweeter. Amplification, signal processing and source electronics serving these drivers are identical to KARLOTTA's front end.

### „ONE OF THE MOST AUDIOPHILE ACTIVE SPEAKERS OVERALL\*“

\*In KARLINA's very first review by Stereoplay (06/18 edition), chief editor Malte Ruhnke employs various superlative praises to describe KARLINA's acoustic performance, awarding her with the rare ‚Stereoplay Highlight‘ rating and attesting her an ‚outstanding‘ price-performance ratio. The universally stunning sound quality of KARLINA in terms of transparency, tonality, coherence, staging, timing and dynamics comes along with a very high room positioning tolerance and Lyravox' full set of digital room correction and tone adjustment tools. For rooms up to 40 m<sup>2</sup>, there may currently be no better audio system than KARLINA.

KARLOS, while being the most compact and affordable member of the Lyravox K-family of systems, is in fact the king of the jungle in the puristic loftstyle domain of audio. Reduced to the max in terms of his uni-segment, ‚gravestone‘ style cabinet, he is one of the boldest two-way systems on the market: armed with Lyravox' new large-caliber 30mm ceramic dome tweeter to match no less than a 10 inch midbass driver in the form of Scan Speak®'s 26W aluminum cone powerhouse, both driven by PASCAL®'s bullet proof T-PRO2 power amps and complemented by the same ambience AMT tweeter like KARLINA. This compact audiophile giant will fit in any room size and interior style, thanks to his timeless design and flexible floorstand or wallmount concept. The latter allows a cable-free wallbound ensemble with a fullsize TV panel for a larger-than-life cinematic or concert experience.
